

We had a great time at #ATCE. Now that the show is over, check us out online at <http://t.co/7PiINQBxyV> for your oilfield chemical needs.

EnvaCor™ Corrosion Inhibitors

EnvaCor™ is our proven line of corrosion inhibitors, offering both intermediates and concentrated packages. Our intermediates are used in oilfield and refinery applications as a component of corrosion inhibitor packages where they are often neutralized with organic acids such as our EnvaDym™ dimer/trimer products. Our concentrated packages offer superior passivation of metal surfaces. We offer both oil and water soluble options for use in batch or continuous treatment.

EnvaDym™ Dimer/Trimer Acids

EnvaDym™ products are manufactured specifically for the oilfield industry ensuring consistent and reliable supply. They are neutralized using MWV's imidazolines (EnvaCor™) in the formulation of oil soluble and oil soluble/water dispersible corrosion inhibitor packages.

EnvaMod™ Rheology Modifiers

Our EnvaMod rheology modifiers are used to alter the low shear, low temperature viscosity of oil-based muds. They are typically used in deep water or cold temperature applications.

EnvaMul™ Emulsifiers

The EnvaMul™ product line consists of modified tall oil derivatives that can be formulated to increase emulsion stability and aid in fluid loss control.

EnvaScale™ Scale Inhibitors

Our patent-pending technology – EnvaScale – is the future of scale inhibitors. EnvaScale's quick and easy detection offers you the benefit of well site analysis in less than 10 minutes. It is detected by titration to 0.5 ppm and effective against a wide variety of scales.

EnvaWet™ Wetting Agents

Our EnvaWet products are used to alter the surface wettability of a wide range of solids to an oil-wet state. We offer products for a variety of downhole conditions.
